

# Mobile Blood Donor Centre

## When the tapping unit comes to the donor

With the HMK Bilcon mobile blood donor centre you will get a unit equipped as a stationary blood donation station in a hospital. The unit is built in to a semitrailer which can be transported and positioned anywhere a normal truck can go.

We have designed the blood tapping unit in collaboration with blood donor departments in Denmark, Sweden and Switzerland with emphasis on functionality and user-friendliness. A trained person can make the mobile unit ready within 15 minutes. It is made up of 55 mm glass fiber reinforced polyester panels, which form outer and inner clothing made according to the "sandwich" principle, to achieve great strength and insulation.

## Intelligent and flexible interior

The unit can be easily transported and set up anywhere. When set up, the pods are easily expanded with a remote control, giving a total of 67 m<sup>2</sup> floor space. The interior is very bright and comfortable for both donors and staff. It is a spacious workplace with a good working environment and well-designed ergonomic conditions.

You have the opportunity to lease the mobile tapping unit through us at an advantageous low interest rate with a fixed monthly fee as we work with Danish and Scandinavian leasing companies.

## Benefits of HMK Bilcon's blood tapping unit:

- Easy access to users
- Easy set up
- User-friendly
- Flexible interior design
- Long lifespan
