

Schrader tank semitrailer

Sales agent in Scandinavia

HMK Bilcon is the scandinavian sales agent for tank semitrailers built by Schrader T+A Fahrzeugbau. With the semitrailer you have the opportunity to get a standardized tanker in a good quality at a sharp price.

Quick delivery with standardized modules

The semitrailer is made of standardized modules which makes a significantly shorter delivery time on the tanker. It is manufactured with standardized components, which also allows us to offer a cheaper alternative to a customized semitrailer.

Flexible design

The semitrailer is made of aluminum and the vehicle can transport up to 56 tonnes. It is possible to divide the tank into several compartments and it is built on a self-supporting aluminum chassis with two to four axles. The tank is made in the patented UNITAS 2000 cylinder profile, which gives the lowest possible center of gravity and good traction conditions to the tractor. It is approved for ADR transport of petrol and diesel and complies with all applicable national regulations. Bottom loading is possible with gravity discharge or pump delivery through hose drums with pull-outs from the right side.

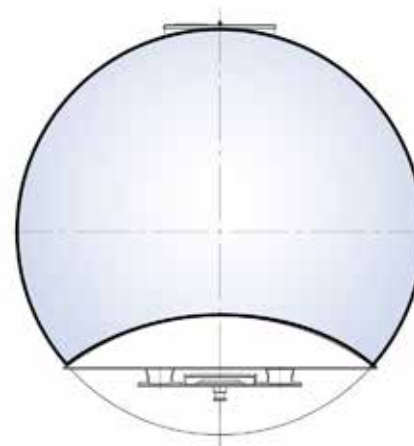

Benefits of Schrader's tank semitrailer:

- Standard product at a lower price
- Industry-optimized solution
- Short period of delivery
- Service and warranty at HMK Bilcon

Schrader semitrailer

Dimensions

Loading volume	55,000 L
Length	13,990 mm
Length from king pin	12,000 mm
Width	2,550 mm
Height	3,400 mm
Wheel base from king pin	8,750 mm
Height over ground of 5th wheel plate	1,200 mm unloaded
Max. load on king pin	18,000 kg
Max. load on axle	30,000 kg
Max. permitted mass	48,000 kg
Empty weight	According to specifications
