

City trailer

Quality that pays off

With HMK Bilcon's **city trailer**, you get a new generation of our well-known city trailer, which we have delivered to the Scandinavian market for a number of years. The tank on the city trailer is slightly longer than previous builds and holds a 37,000 liters of fuel. As a starting point, the tank is divided into seven compartments, but a smaller number of compartments can be offered if necessary.

In the development phase, we have had a special focus on accessibility, and the city trailer is therefore optimized especially for city driving. To ensure good accessibility, the city trailer is built with two forcibly steered axles with the VSE control system. This makes it easy for the driver to steer the trailer around even with very tight access conditions in the big cities. The connection between the signaling unit and the control box is now electronic instead of hydraulic as before, and the trailer can be maneuvered from the driver's cab. The city trailer is supplied with equipment for pump deliveries with MID approved measuring system and two hose reels at the rear.

Ease of use with SafeCon® III

We have installed our electronic fuel delivery control system SafeCon® III on our city trailer. This makes the operation of the city trailer simple and user-friendly. With our clear control panel, the risk of incorrect operation and mixing of products is reduced.

BENEFITS

OPTIMIZED SOLUTION

LOW SERVICE WEIGHT

LARGE LOAD IN ONE TRIP

FAST DELIVERY

GOOD ACCESSIBILITY
