

Off-road fuel truck

Fuel handling under difficult conditions

With HMK Bilcon's **Off-road fuel truck** you will get a solid truck perfect for delivering fuel and diesel in difficult and rough areas where the last transported liter counts. The truck is manufactured and tested according to our very high quality standards in order to transport and deliver fuel safely according to applicable ADR rules. Based on our knowledge and years of experience in building defense equipment we have designed the off-road fuel truck to meet high requirements for transport of fuel in terms of ease of use, volume and maneuverability and of course our solutions comply with all legal requirements.

Optimized weight and flexible chassis

The tank is made of aluminum and has a low weight making it possible to carry more fuel in one load. There are both transverse and longitudinal baffles in the tank providing a safe transport of the fuel. The tank is mounted on a reinforced flexible chassis with eight-wheel drive, which makes the vehicle optimal for driving in uneven terrain.
