

# Water tank container

## High quality container for water distribution

With HMK Bilcon's water tank container you will get a container manufactured and tested according to our high quality standards as our other customized solutions for the military. All our solutions comply with all legal requirements. The container is used for transport, storage and delivery of clean drinking water in military and humanitarian areas. It can heat and cool water and can operate in temperatures from -46° to + 49° C and can also be used in emergency fire fighting.

## Easy transport and handling

The container is a standard ISO 20 feet container with a bottom frame equipped with crane and fork pockets, making it easy to transport. It can be transported by truck, rail or air. The frame is made of steel while the container is made of aluminum. The container is available with or without frame. The pump module can be adapted to the desired specifications and the container is self contained with onboard generator and hydraulics.

## Benefits of HMK Bilcon's water tank container:

- High quality
- Industry-optimized solution
- Low weight
- Fast set-up
- Possibility of UV treatment of water
